fine wire staples A type 53

- Standard fine wire staple for hand-, electric-, accu- and airtackers, ideal for fastening of fabrics and textiles.
- The right staple length ensures you are always on the safe side. There is a correct staple length for every application. We recommend 1:3 for the fastening material and 2:3 for the anchoring material. For example, if you want to fasten fabric with a thickness of 2 mm to softwood, you should use a 6 mm staple. For hardwood, a ratio of 1:1 is sufficient.
- The right package size: For occasional tacker use, our staples are available in a handy reclosable sliding box. Alternatively, we also offer some staple types in large packs for bigger tacker projects.
- Choose between standard hard staples and superhard staples for professional applications. "Superhard" refers to a steel wire of the highest strength, indicating the stability of the staple.
- Decide which material your staples should be made of: Novus fasteners are manufactured exclusively from steel wire with a galvanised coating to ensure maximum environmental sustainability and exceptional rust protection. Stainless steel V2A staples are particularly suitable for long-term outdoor applications.
